**Part/Recently Qualified Patent Attorney, Electrical Engineering, £40-45,000/£65-70,000**

A boutique practice with multiple outfits across the UK is growing their Electronics department and is in need of a part or recently qualified attorney to add to their ranks. Ideal candidates are hoped to have at least 18 months' experience in the profession and have a strong academic background in electronic or computer engineering, telecommunications, physics or a related discipline. You will be responsible for managing a niche portfolio of intriguing clients, with a technology base ranging from intricate and detailed computer architecture through to financial and banking systems for large multi-site corporations. You will need to share the team's contemporary approach to business, possess a commercial edge and the ability to recognise and implement viable business opportunities, both for the firm and in furthering your clients' IP. There is a collegiate working environment where ideas are shared and developed among the team and plenty of opportunity to build and tailor your own practice to suit your strengths and interests.

**Patent Litigation Solicitor, London**

Become heavily involved in patent litigation across Europe and collaborate with your co-workers on patent and design cases, as well as some transactional aspects of IP. Work closely with your clients and be on hand from initial conception and invention harvesting through to the commercial management and international protection of their IP. The team provides a full service offering of IP litigation, licensing and exploitation strategy and handles an unique set of technologies suited to someone with a background in physics, electronics, telecommunications or similar, although other disciplines will also be considered. You will likely have recently qualified as a solicitor, however the firm will consider candidates with up to 3 years' PQE, and have trained in a recognised legal practice with exposure to litigation and a large client base. Experience in patent litigation is preferred but is not a requirement and all candidates with the necessary knowledge of IP and/or litigation, albeit as separate disciplines, will be considered.

**Qualified, Patent Attorney, Mechanical Engineering, South, £60-65,000**

Work in a progressive environment and benefit from first class direct client interaction, with regular face to face meetings across the UK and internationally. The individual technical teams within the firm adopt a highly collaborative approach, working closely with colleagues and clients to ensure the best possible outcome is achieved. The successful candidate will be working in the highly diverse Mechanical Engineering team, which specialises in technologies including, but not restricted to, aerodynamics; control, nuclear and rail engineering; domestic appliances and refrigeration; engine components; pumps and hydraulics; heating and marine technology; and medical devices. Ideal candidates will have an excellent academic background in mechanical engineering and will have achieved, or be in the final stages of, UK qualification. Knowledge of aeronautical and automotive technologies is beneficial, but not a necessity.

**Trade Mark Attorney, Channel Islands**

This is a tremendously exciting opportunity for a trade mark attorney qualified in a major international jurisdiction to move to Jersey in the Channel Islands. Ideally you will be recently qualified, or nearly qualified if you are within the UK system, have a commercial aptitude and an interest in building business. The role will have an international flavour, requiring travel to conferences and visiting new and existing clients overseas. The firm's portfolio is diverse and includes work within developing nations, making for some interesting challenges a typical trade mark attorney might not face. This will mean that you will need to gain an appreciation for cultural differences as well as key distinctions amongst legal systems. This is a hands-on role where you will be working creatively with attorneys and IPOs across the world and also be encouraged to take a keen interest in the firm's systems management, contributing to its development and suggesting improvements.

**Graduate Level International Opportunity in IP, £25,000**

Entering the IP profession can be tough, you might have applied to a lot of firms and received not much in the way of a positive response or you have attended interviews in a very competitive environment and lost out. We have an alternative solution. We are currently recruiting an international position for a firm that will provide full training and relocation support for graduates from a discipline related to electronics or telecommunications. The career path is likely to be very different to a typical UK based trainee - with more of a focus on the commercial side of IP as well as the technical. As a consequence, there'll likely be some international travel and certainly a great deal of contact with your client base earlier in your career than expected. If you want to get your career kick started but are also pining for a post degree bout of travelling then perhaps this is a way to combine both.

**Recently Qualified Trade Mark Attorney - up to 3 Years' PQE, London, £57-£65,000**

A commercially focused role with one of most highly regarded Trade Mark teams in Europe. Freely utilise, and expand upon, your commercial skills in order to build your own client base as well as serving the already impressive work portfolio alongside the existing Trade Mark team. In time, you will become involved in account management and contribute towards the future growth and direction of the business, collaborating with leading Partners in the trade mark, patent and wider IP field. Ideal candidates are hoped to have strong technical skills and be confident in using them under pressure, as well as being comfortable with continued learning. The firm invest heavily in their brand and are keen for their attorneys to share in their highly energetic, commercially aware and sociable approach.

**Finalist Level Patent Attorney, Biotechnology, London, c. £52,000**

Join a pioneer in the industry with a stellar reputation and enjoy a refreshing business model, relaxed working environment and one of the best bonus schemes around. The Life Sciences team is one of the true success stories of the industry and has, despite economic unsurety, ignored the decisions of their competitors and grown steadily over recent years. The firm operate as a meritocracy and always ensure that their best people are rewarded; with demonstrable career progression, the freedom to mould your practice to suit your interests and access to some of the top clients and Partners in the field being but a few perks of the job. Ideal candidates will be nearing qualification, although those with 2 years' experience having completed the Queen Mary or those who are recently qualified will also be considered.

**In-house Opportunity**

An internationally recognised brand is on the look-out for a qualified patent attorney to join their in-house IP department. They will consider candidates from a broad range of technical backgrounds, primarily the chemistry and engineering disciplines. Please get in touch for further details.
