# Be as happy as Larry

## Attorney - Qualified, Mechanical Engineering/Chemistry, Greater London

Gain access to a stimulating portfolio that will often take you beyond the traditional remit associated with a typical patent attorney role. For example, as well as overseeing the entire patenting process right through from initial invention harvesting, you will have some exposure to copyright, design and trade mark work. Working closely with a range of clients based in the UK, US and further afield, the successful candidate will handle diverse subject matter spanning across a number of technical specialisms. This is a truly dynamic role with a great deal of coverage and a real chance to progress to Partner in a short period of time. There will also be significant opportunity to get involved in the firm's wider business strategy, by attending networking events and carrying out other business development related activities both at home and overseas.

## Attorney - Part Qualified, Electronics or Engineering, London

Start your career on the best possible footing with access to an ever changing mix of technologies and an interesting client base, ranging from sole entities and academia, to SMEs and world renowned multinational conglomerates. The training scheme is individually tailored to your own needs and interests, and the working environment is both approachable and team orientated. You will be encouraged to work closely with your clients, helping to identify and shape their IP and construct complex arguments to ensure their portfolio's ongoing protection. The firm adopts an international approach to business, meaning there will be ample opportunity for overseas travel, as well as local travel to attend networking and industry events, and meet with prospective clients to further build your own portfolio.

## Chemistry, Finalist Level Patent Attorney, London

This firm is consistently noted for the exceptional support and advocacy they provide their clients, which include multinational corporations, leading universities and innovative SMEs originating from a range of stimulating industries. You will be welcomed into a friendly and supportive team, and alongside carrying out the broad spectrum of patenting duties you will also be responsible for advising clients on their wider IP strategy including the maximisation of the commercial potential of their IP. You will need to be commercially astute with excellent communication and relationship building skills, as well as a client oriented outlook. The environment is non-hierarchical in which your ideas will be respected and considered, irrespective of your position on the ladder, as well as there being a clear path to Partnership and a competitive and achievable bonus scheme.

## Salaried Partner, ICT/Electronics/Telecommunications, Yorkshire

Take advantage of this pretty rare and very exciting opportunity, and progress to join the equity Partnership of this firm on an accelerated time frame. There is a considerable existing workload and clients include global corporations, SMEs and renowned academic institutions. In particular, the firm works with world leaders in self-service terminal and touch sensitive display technologies and is highly active in the financial technology and telehealth sectors. Given the range and mix of existing clients the role is both commercial in respect to providing strategic IP advice as well as procedural in terms of original drafting and prosecution. The firm would be very happy for an attorney joining them to both support the existing client portfolio, in addition to exploring new avenues of interest to them. There will be opportunities to be involved in firm management, business development and training, as well as funded overseas trips.

## Attorney - Newly Qualified, Electronics, Midlands

Work closely with Partners experienced in representing clients internationally and who handle regular oppositions and appeals before the UK and European Patent Offices. You will be offered ample opportunity for overseas travel in order to meet with clients and associates, and to attend industry conferences and events. Secondment to one of the firm's other offices is also wholly achievable, be it in the UK, Europe or further afield. The environment is challenging and ultimately rewarding, and a great deal of importance is placed on connectedness between different offices, both in the UK and overseas. Due to the size of the firm there is more than enough work available to accommodate your individual expertise, giving you the opportunity to tailor your practice to suit your interests as your role develops and explore areas beyond your own technical specialism.

## Electronics, In-house Opportunity, South

Assume an extremely strategic and commercial role, where you will be responsible for the protection of the IP originating from the UK arm of this company's business, as well as being expected to liaise closely with the company's overseas head office in respect to all regional filing and prosecution and the provision of FTO advice for new product and market development. Demonstrable man management skills will be required in order to effectively coordinate the external network of patent and trade mark attorneys, in addition to leading the internal IP team and support staff. Regular travel to countries including Germany, Japan, Switzerland, Portugal, Brazil, China and the US will be required, and there will be the opportunity to pursue your own career interests through joining industry boards and panels.
