

IP but different.

## Patent Attorney & Business Developer

Fellows and Associates' client is developing its Manchester office and lacks you.

### Who are you

You have an engineering or electronics background and enjoy working with high quality direct clients. You will enjoy being part of a small team to build a client base and a profile of your own.

Working with an established network of contacts in the region and building on key existing relationships at the firm this role would suit an Attorney wishing to fast track their career via confident and early delivery of results. Whilst the practice has an abundant and growing volume of work it is looking for you to build on the firm's success by establishing new business in the Greater Manchester region. You will be a qualified UK and European Patent Attorney with a track record of business development or wish to exercise such skills successfully, who would relish working for a major player in the IP sector and be given latitude to create a role that is entirely your own.
